

Consolidated Pre-Real-Data Owner Status

Document control

Field	Value
Milestone	R.10J
Document version	1.0
Generation date	2026-09-08
Repository / branch	custom_terminal / main
Exact source commit	b7c6124c6e6a353b61078a950652b763db3467bf
Remote synchronization	VERIFIED_SYNCHRONIZED
Evidence classification	OWNER_STATUS_REPORT_NON_EXECUTION_EVIDENCE
Owner-review status	NOT_RECORDED
Next-task approval	NOT_RECORDED

NO ANALYSIS, BACKTESTING, SCORING, RECOMMENDATION OR TRADING AUTHORIZED

This is an owner-status document. It records evidence and asks for decisions; it does not grant permission to perform the next task.

Test and evidence status	12
Safety and authority boundaries	13
Proposed next development stage	14
Owner review and separate decisions	15

Status vocabulary: **PASS** means directly demonstrated for the stated scope; **BLOCKED** means a required gate prevents progression; **NOT QUALIFIED** means available evidence has not passed the trust contract; **NOT APPLICABLE** means the source or capability does not address that question.

Executive summary

The project is building an analysis-only decision-support system for Indian markets. Its eventual visible outputs may include a market-sentiment score and individual stock scores, but only when those values can be traced to clean, point-in-time data and genuinely out-of-sample evidence.

The engineering machinery is substantially proven on fictional data. It can preserve source vintages, calculate deterministic features and outcomes, run walk-forward validation, separate predictive/economic/portfolio evidence, and publish immutable noncanonical artifacts. This does **not** prove that any market edge exists.

Current market-data readiness remains blocked. The broad equity directory is survivor-selected; the official NSE population sample qualified only 3 of 12 dated security/bhavcopy pairs; terminal outcomes, stable identity, corporate actions, benchmarks and historical costs remain incomplete. Momentum v1 is not validated or actionable.

Readiness area	Current state
Architecture	DEFINED
Synthetic Infrastructure	MECHANICALLY_VALIDATED_NONCANONICAL
Historical Market Data	NOT_QUALIFIED
Historical Population	FAIL_3_OF_12_PAIRS
Real Data Research	NOT_AUTHORIZED
Economic Edges	NONE_VALIDATED
Market Sentiment Score	PLANNING_ONLY_HIDDEN
Stock Scores	PLANNING_ONLY_HIDDEN
Trade Execution	PERMANENTLY_PROHIBITED

The single proposed next stage is LOCAL_FNO_DATABASE_READ_ONLY_QUALIFICATION_STAGE_1. It is a bounded qualification task for an already-local candidate source, not a backtest. It requires a separate owner decision after this report is reviewed.

What we are trying to build

The target is a trustworthy research and capital-allocation support system, not a trading bot. Deterministic code remains the numerical source of truth; AI may explain evidence and propose hypotheses but may not invent scores or override validation.

Layer	Responsibility	Required evidence
Data ingestion	Acquire immutable source objects through replaceable providers.	Source identity, retrieval time, hashes, terms and parser version.
Data qualification	Normalize typed facts and test completeness, identity and timing.	PASS/FAIL/UNKNOWN capabilities with evidence.
Research	Declare hypotheses, universes, features and executable outcomes.	Pre-registration and point-in-time inputs.
Validation	Use walk-forward folds, purge/embargo, costs and untouched holdouts.	Out-of-sample prediction, economic and portfolio diagnostics.
Scoring	Calibrate validated predictions and keep confidence separate.	Comparable historical buckets, uncertainty, decay and lifecycle.
Presentation	Expose approved evidence and limitations without recalculation.	Immutable read models and provenance.
Trading	Outside project scope.	No order placement, modification or cancellation.

Intended scores remain richer than a number: raw prediction, confidence, regime, horizon, contributors, risks and behavior of comparable historical scores must remain visible. Missing evidence cannot be converted into a neutral score.

Standing owner decisions include: no paid market-data providers; preference for relevant free official sources; version2.0 remains separate; scores remain hidden until supported; the local F&O database may be audited later; portfolio and some presentation choices remain deferred; and the project must never execute trades.

What has been completed - foundation

Milestone	Status	Evidence-backed result
Architecture	DEFINED	Local-first modular monolith with typed Parquet facts, DuckDB analytics, SQLite workflow state and immutable evidence manifests.
Vertical Slice A	INFRASTRUCTURE_PROOF	Momentum v1 mechanics reproduced on a golden fixture and walk-forward machinery implemented; no actionable score.
A.5	DATASET_NOT_TRUSTED	Broad local equity directory is survivor-selected and insufficient for cross-sectional edge approval.
A.6-A.10	PUBLIC_ROUTE_INCOMPLETE	Provider-neutral ingestion exists; official sample produced 12 bhavcopies but only 3 dated population pairs; NSE permission response remains absent.
A.11-A.12	CURRENT_ONLY_READY	Kite supports bounded read-only current instruments, quotes and ephemeral health; no historical use or order endpoints.
R.1-R.9	GOVERNANCE_FOUNDATION	Shared research contracts, promotion gates, evidence manifests, split access, owner-review gates and F&O audit safety plans were established.

Momentum v1 status

The legacy experiment was rejected in its original archive. The new Slice A reproduced mechanics on a controlled fixture, but the available broad dataset failed survivorship and provenance gates. Apparent results on that directory cannot confirm the hypothesis. Momentum is neither VALIDATED nor ACTIVE, and it emits no BUY/HOLD/REDUCE recommendation.

Evidence categories

- **Mechanically validated infrastructure:** deterministic contracts and tests.
- **Synthetic-only evidence:** fictional known-answer fixtures, noncanonical.
- **Historically trustworthy market evidence:** not yet sufficient.
- **Economically validated edges:** none.

What has been completed - synthetic platform and governance

All items on this page are engineering evidence from fictional inputs, not market findings.

Milestone	Status	Evidence-backed result
R.10A	SYNTHETIC_NONCANONICAL	Point-in-time pipeline, feature, outcome, walk-forward, economic and portfolio evidence mechanics validated on fictional data; holdout left unconsumed.
R.10B	SYNTHETIC_NONCANONICAL	Incremental ingestion, schema drift, dependency rebuilding, immutable reuse and recovery validated.
R.10C	SYNTHETIC_NONCANONICAL	Security events, causal identity, non-destructive adjustments and terminal-economics mechanics validated.
R.10D	SYNTHETIC_NONCANONICAL	Exchange-calendar, decision-clock, execution-session, purge and embargo mechanics validated.
R.10E	SYNTHETIC_NONCANONICAL	Multi-feature evidence, calibration, confidence, multiplicity and lifecycle semantics validated; no external decision.
R.10F	SYNTHETIC_NONCANONICAL	Immutable evidence publication, freshness, supersession and read-only facade validated; outputs remain NO_DECISION.
R.10G	SYNTHETIC_NONCANONICAL	Mandate, portfolio accounting and internal decision-policy mechanics validated; external result remains NO_DECISION.
R.10H	REMEDATION_REQUIRED_THEN_COMPLETED	Readiness audit found stale fingerprint assumptions and 14 missing executable entries; no engine defect or economic readiness.
R.10I	GOVERNANCE_REMEDIATE	Historical review semantics and cumulative 77-entypoint inventory corrected forward-only.
R.10I.1	COHERENCE_CONFIRMED	Conflicting working-tree hashes reconciled; authoritative 280-file Git-object fingerprint is 19ed28f407ff62a44012f1d1e4b1870ba15be30155c9c19bee6288ab228f1bc6.

The R10A holdout remains UNCONSUMED_SYNTHETIC_HOLDOUT. Synthetic successes prove that the engines respond correctly to declared known answers and failure challenges. They do not estimate a real return, validate a market relationship, or justify a score.

What data we currently have - access and coverage I

Availability describes what is present or identified; it does not establish research fitness.

Source	Cost/access	Current availability	Historical depth	Primary purpose
Existing equity price directory	Existing local/free files	430 symbol files; nominal 2000-2026 history	Long but survivor-selected	Historical cash-equity prices
Local F&O database	Already local; source cost unverified	Located and sampled, not qualified	Not yet audited	Potential futures/options history
NSE official public	Free public surfaces; paid routes prohibited	12/12 sampled bhavcopies; only 3/12 dated security snapshots	Price files partial; population history incomplete	Bhavcopy, security snapshots, corporate filings
SEBI official	Free official publications	Selected repositories identified	Varies by document series	Regulations, orders, event and cost evidence
BSE official	Free official public surfaces	Interfaces identified; sample incomplete	Unqualified	Independent listing and lifecycle reconciliation

The existing broad equity directory is **not sufficient** to approve a cross-sectional edge. Long date coverage and many files do not compensate for omitted historical securities, unresolved identities or missing terminal economics.

What data we currently have - access and coverage II

These sources supplement specific current, benchmark or cost questions; none closes historical equity-population gaps.

Source	Cost/access	Current availability	Historical depth	Primary purpose
AMFI	Free official mutual-fund source	Not evaluated for this equity scope	NOT APPLICABLE	Possible future mutual-fund research only
Kite Connect	User account/API application required; not an archive source	Read-only live smoke test passed	CURRENT_TRADABLE_ONLY	Current instrument discovery and bounded quotes
NSE Indices	Official public reports	Separate PRI/TRI surfaces identified; no qualified object	UNKNOWN	NIFTY 50 PRI/TRI benchmark evidence
Government/SEBI/NSE cost circulars	Free official publications	Source categories identified	Incomplete	Dated statutory trading-cost schedules

Kite current instruments are not a historical universe and cannot validate historical cross-sectional research. AMFI is relevant to mutual funds, not to equity population or security identity. The local F&O database is not trusted merely because it exists.

Data qualification and allowed use I

Qualification remains source- and purpose-specific. Missing capabilities stay explicit.

Source	Survivorship / terminal	Corporate actions	Qualification	Allowed vs prohibited
Existing equity price directory	FAIL; terminal: FAIL	UNKNOWN	NOT QUALIFIED	Allowed: Compatibility and bounded diagnostics only. Prohibited/unproven: Cross-sectional edge approval, complete historical universe.
Local F&O database	NOT APPLICABLE/UNKNOWN contract coverage; terminal: Contract expiry handling unqualified	Underlying continuity unqualified	LOCATED_AND_SAMPLED_NOT_QUALIFIED	Allowed: Future separately authorized read-only qualification. Prohibited/unproven: Research, strategy, scores, unrestricted scans, writes.
NSE official public	UNKNOWN/FAIL reconstruction; terminal: Economic outcomes incomplete	Selected case evidence only	PUBLIC ROUTE INCOMPLETE	Allowed: Retained qualified evidence and planning only. Prohibited/unproven: New acquisition, full historical population, production research.
SEBI official	Not a population source; terminal: Case evidence possible, not complete	Supplementary event evidence	PARTIAL/SUPPLEMENTARY	Allowed: Source evaluation and retained qualified documents. Prohibited/unproven: Substitute for exchange population.
BSE official	UNKNOWN; terminal: UNKNOWN	UNKNOWN	NOT QUALIFIED	Allowed: Planning; keep BSE listings distinct. Prohibited/unproven: Ticker/name-based stitching to NSE.

Technical accessibility is not permission, and permission is not completeness. Every source must pass both evidence-quality and lawful-retention gates before canonical research can use it.

Data qualification and allowed use II

Current access or conceptual methodology does not imply qualified historical research evidence.

Source	Survivorship / terminal	Corporate actions	Qualification	Allowed vs prohibited
AMFI	NOT APPLICABLE TO EQUITIES; terminal: NOT APPLICABLE	NOT APPLICABLE	NOT APPLICABLE	Allowed: Mutual-fund planning only. Prohibited/unproven: Equity identity or survivorship evidence.
Kite Connect	FAIL as historical solution; terminal: Inactive/delisted instruments may be absent	Not qualified	CURRENT READ-ONLY READY	Allowed: Manual current health and quotes. Prohibited/unproven: Historical universe, canonical research, orders.
NSE Indices	Benchmark methodology only; terminal: NOT APPLICABLE	Dividend treatment documented conceptually	NOT QUALIFIED	Allowed: Methodology planning. Prohibited/unproven: TRI claims from PRI, benchmark publication.
Government/SE BI/NSE cost circulars	NOT APPLICABLE; terminal: NOT APPLICABLE	NOT APPLICABLE	NOT QUALIFIED	Allowed: Planning and existing citations. Prohibited/unproven: Backfilling old periods with current rates.

NSE and BSE listings remain distinct. Issuer-name or ticker similarity cannot merge them. Current rates cannot be carried backward into historical cost schedules. PRI cannot be silently substituted for TRI.

What remains blocked or unknown

- Complete historical NSE listed population, including non-trading and later inactive securities.
- Complete suspension, delisting and authoritative economic terminal outcomes.
- Stable instrument/listing/ISIN/dated-alias identity across the research interval.
- Complete point-in-time corporate-action ledger and adjustment evidence.
- Historical exchange turnover at production scale where the universe requires it.
- Local F&O database schema, coverage, provenance, corrections, retention and point-in-time fitness.
- Provider permission for immutable retention and reproducible normalized research tables.
- Real-data research authorization and any defensible historical research start date.
- Economic validity of Momentum v1 or any other edge.
- Validated market-sentiment and individual-stock scores.
- Portfolio construction rules and final presentation choices.

No defensible continuous historical start date has been promoted. Missing delisting consideration remains unresolved; a last quoted price is not an economic terminal value. A selected set of circulars is not a complete event ledger.

Scores are planning concepts only. Market-sentiment inputs represent different economic objects and clocks; stock-score categories have distinct data and leakage risks. No aggregation weights, calibration or recommendation semantics have been approved.

Test and evidence status

The latest completed suites and evidence checks establish engineering integrity within their declared scopes.

Check	Latest verified status
Root Suite	742 passed, 4 expected Windows symlink skips, 2 established development warnings, 0 failed
Data Test Suite	289 passed, 0 failed
Artifact Hashes	R10A-R10G 208 of 208 validated at R10I; chained roots unchanged
Parquet	34 of 34 synthetic evidence objects readable at R10I
Momentum Spec Sha256	1eed7fd7960c177af8ef90972ea9c4409827a81ab3af8387d69273e9c0ce90d5
Momentum Golden Sha256	d3f72849464c176c81da036e01db7242672d0c7504ce817400242fd228a0779f
R10A Holdout	UNCONSUMED_SYNTHETIC_HOLDOUT
Entrypoint Inventory	77
R10I Fingerprint File Count	280
Fingerprint Contradiction	RESOLVED_BY_R10I_1_FORWARD_AMENDMENT

Authoritative R10I Git-object fingerprint (280 policy-v2 files):

```
19ed28f407ff62a44012f1d1e4b1870ba15be30155c9c19bee6288ab228f1bc6
```

R10I.1 proved that e0870bd . . . was a stale pre-refresh working-tree value and 236fddae . . . was a post-refresh working-tree value. Neither is presented as a commit fingerprint. The immutable implementation and evidence commits both reproduce the full hash above.

These tests prove deterministic mechanics, preservation, contracts and fail-closed boundaries. They do **not** prove market-data completeness, representative distributions, scalable production performance, profitability, or an economically valid edge.

Safety and authority boundaries

NO ANALYSIS, BACKTESTING, SCORING, RECOMMENDATION OR TRADING AUTHORIZED

Boundary	Authorized?
Analysis Only Product	YES
Trade Execution Authorized	NO
Broker Orders Authorized	NO
Unsupported Score Publication Authorized	NO
Private Or Paid Data Authorized	NO
R10A Holdout Consumption Authorized	NO
Real Data Research Authorized	NO
Status Report Approval Grants Research Authority	NO

- Analysis-only product; no trade execution and no broker orders.
- No promotion or display of unsupported scores.
- No silent use of private or paid data.
- No R10A holdout consumption without separate exact authorization.
- No live-broker code change in this milestone.
- No real-data research authority arises from generating or approving this status report.

The application implements a narrow Kite read-only allowlist, but an account token may possess broader provider permissions. The claim is about application behavior, not about the theoretical capabilities of the token.

Proposed next development stage

This proposal is presented for a separate owner decision and is not active work.

LOCAL_FNO_DATABASE_READ_ONLY_QUALIFICATION_STAGE_1

Recommendation: **RECOMMENDED_SEPARATE_OWNER_DECISION**

It is the narrowest bounded step that can replace assumptions about an already-local candidate source with evidence, without running a strategy or acquiring external data.

Preliminary scope

- Bind the exact owner-approved local database through the existing private locator without publishing its path.
- Prove read-only opening and preserve a versioned database identity.
- Inspect schema, tables, columns, indexes and metadata under bounded timeouts.
- Measure bounded date, symbol, contract, expiry and field coverage.
- Check bounded duplicates, missingness, OHLC/volume/OI validity and continuity patterns.
- Assess provenance, raw-source lineage, corrections, retained vintages and permitted use.
- Produce a qualification verdict for possible later futures/options research.

Explicit exclusions and abort boundary

- No strategy, feature, return, backtest, simulation, score or recommendation.
- No database write, repair, export, sidecar, unrestricted scan or external acquisition.
- No trading or broker action.
- Abort if read-only safety, bounded queries, provenance or access conditions cannot be established.

Status: **NOT_AUTHORIZED_UNTIL_SEPARATELY_APPROVED_AFTER_REPORT_REVIEW**

This is the narrowest useful next qualification step because it can determine whether an already-local candidate source deserves any later research use. It does not require a new external download and does not test a trading idea. If read-only safety or bounded inspection cannot be established, the stage stops and reports that blocker.

Owner review - separate decisions required

NO ANALYSIS, BACKTESTING, SCORING, RECOMMENDATION OR TRADING AUTHORIZED

Facts to confirm

- The report accurately separates synthetic machinery readiness from real-data and economic readiness.
- No market edge or score is currently validated or actionable.
- Paid market-data providers remain prohibited.
- Kite remains current-only; AMFI is not equity-population evidence.
- The local F&O database remains unqualified.
- The project remains analysis-only and must never execute trades.

Material risks

Historical population, identity, terminal outcomes, corporate actions, benchmarks, cost schedules, provider rights and real-data reproducibility remain materially incomplete. A readable database may still fail qualification.

Decision A - report accuracy

☐ Approve this report as an accurate status summary. ☐ Request corrections.

Corrections / affected section: _____

Decision B - proposed next milestone

☐ Separately approve LOCAL_FNO_DATABASE_READ_ONLY_QUALIFICATION_STAGE_1. ☐ Do not approve it yet.

☐ Pause development.

Owner name/signature: _____ Date: _____

Initial machine state: report approval UNRECORDED; next-task approval UNRECORDED. Approval of Decision A does not imply approval of Decision B. Neither choice authorizes research, backtesting, scoring, recommendations or trading.
